## DETAILED ACTION

### ***Response to Amendment***

This action is in response to the Applicants' preliminary amendment filed on March 1, 2004. Claims 1-12, 16-32, and 36 have been canceled. Claims 13-15 and 33-35 are pending and will be considered for examination.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

**Claims 13-15 and 33-35 are rejected under 35 U.S.C. 102(e) as being anticipated by Petty et al. (US 6,337,858 B1)(“Petty”).**

Referring to claim 13: Petty discloses a computer-implemented method comprising:

- storing a telephone service logic program on a personal page accessible over the Internet (col. 7, line 66 – col. 8, line 3: “*The voice button used to initiate a voice communication session with the service subscriber 32 may be a voice button form 56 written in CGI script that are embedded in the web page code that transmits appropriate call setup messages to the web server 38.*”)

- electronically providing information encoded in the service logic programs to at least one computer controlling telephone service so as to enable the at least one computer controlling telephone service to control telephone service in accordance with the service logic program (col. 8, lines 3-18: "*It may likewise be a voice button applet 58 written as a JAVA applet that is loaded at the same time as the web page is loaded into the client 18, 20 web browser. The applet transmits the appropriate call setup messages to the web server 38. A voice button hyperlink (not illustrated) may also be used. A hyperlink with the web page that links with appropriate CGI scripts on the web server 38 may be used for this purpose. When accessed, the CGI script on the server transmits the appropriate call setup messages to the web server 38. If voice over IP communications are to occur, the client 18, 20 workstation must include a VoIP client 60 that receives call setup requests from the VoIP gateway 42. If the web server 38 detects that the client 18, 20 does not have a VoIP client 60 resident, the web server 38 could be enabled to request permission to download an appropriate VoIP client 60.*")

Referring to claim 14 and 15: Petty discloses all the limitations of claim 13 as noted above. Furthermore, Petty discloses that the computer controlling the telephone service is a telephone company computer or a user's local local computer (col. 7, line 66- col. 8, line 18).

Referring to claim 33: Claim 33 is rejected under the same rationale as set forth above in claim 13.

Referring to claims 34 and 35: Claims 34 and 35 are rejected under the same rationale as set forth above in claims 14 and 15.

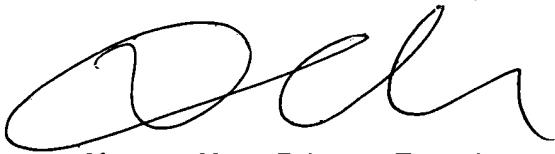

Art Unit: 3625
